

# How to Use Eye Ointments and Gels Properly

(Using a mirror or having someone else give you the eyedrops may make this procedure easier.)

1

Wash your hands thoroughly with soap and water.

2

Avoid touching the tip of the tube against your eye or anything else — the medication and its container must be kept clean.

3

Holding the tube between your thumb and forefinger, place it as near to your eyelid as possible without touching it.

4

Brace the remaining fingers of that hand against your face.

5

Tilt your head forward slightly.

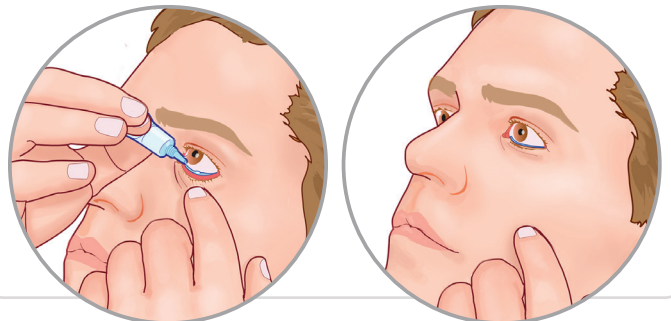

6

While tilting your head back, pull down the lower lid of your eye with your index finger to form a pocket.

7

Squeeze ribbon of ointment or gel into the pocket made by the lower eyelid. Remove your index finger from the lower eyelid.

# How to Use Eye Ointments and Gels Properly

(continued)

8

Blink your eye gently; then close your eye for 1 to 2 minutes.

10

Replace and tighten the cap right away.

11

Wash your hands to remove any medication.

9

With a tissue, wipe any excess ointment or gel from the eyelids and lashes. With another clean tissue, wipe the tip of the tube clean.

## Remember

- Follow directions carefully
- Do not miss doses
- Your eyesight may be cloudy after using the ointment or gel
- Store medications out of reach of children
